PPG INDUSTRIES (UK) LTD

Committed to innovating solutions

PPG has long been a leader in product and process innovation including glass fiber reinforcements for high strength plastics, automotive safety glass, energy conserving architectural glass, automotive industrial electrode position systems and coatings, flexible automotive finishes and automotive powder clear coats.

Other PPG innovations include lightweight, impact resistant optical plastics and Transions light-activated variable-tint plastic lenses for eyewear, improvements in the float processes for producing chlorine and caustic soda, coatings that set instantly with ultra-violet light or electron beams, and environmentally friendly water-based coatings for industrial and other applications.

PPG aims to lead each of its major markets while generating superior, consistent financial performance. The company's emphasis on development of breakthrough products and processes, investment in highly productive manufacturing facilities and profitable global expansion combine to provide customers with the best services and products of the highest quality.
